

COMMITMENT

At your service

The international management team of Hempel Special Metals has many years of experience in the owner managed group. The more than 90 employees at seven locations worldwide have extensive knowledge in the world of metals. Our account managers emphasise the personal contact with the customers and take responsibility for every delivery. We find the right tailor made solution in a flexible way.

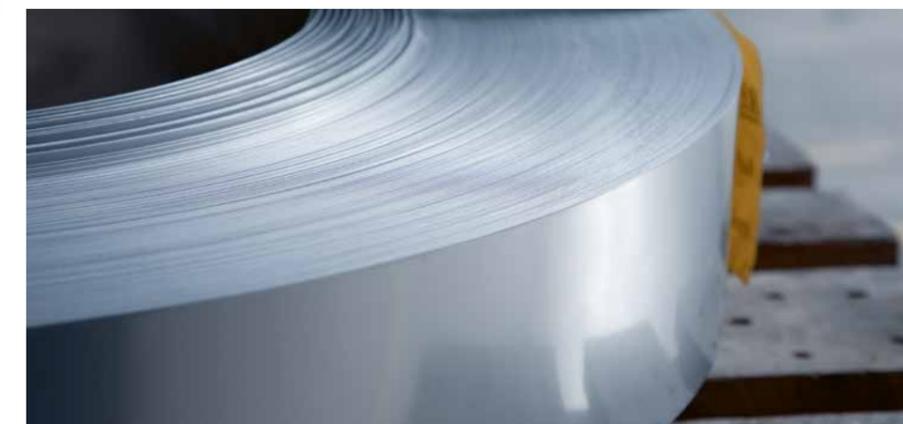

"High performance"

heat resistant materials

QUALITY

Best material selection

The best producers worldwide supply over 30 alloys in stainless steels, nickel alloys and titanium for the Hempel-stock. This enables us to supply your daily needs in high-quality strips, sheets, rods, pipes, forged parts and fittings. Our special ISO certificates for the medical and the aviation industry as well as many customer specific approvals demonstrate the high quality standards that comes with our products and services.

As a Swiss group,
the emphasis is
on quality

ADDED-VALUE

Low procurement costs

To minimise costly offcuts in your production, we process the material on our cutting and machining equipment according to your specifications. Should offcuts still arise, our Econoxx-Metal-Exchange offers a solution; the first worldwide internet market place for surplus semi-finished products, second choice material and inventory for liquidation.

For projects our specialists put together tubes, pipe accessories, forged parts or other machined components, individual or in packages according to customer requirements.

Our services optimise the value chain

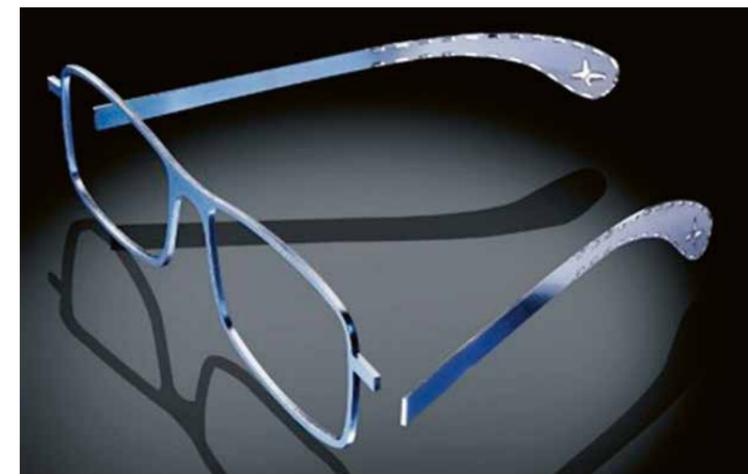

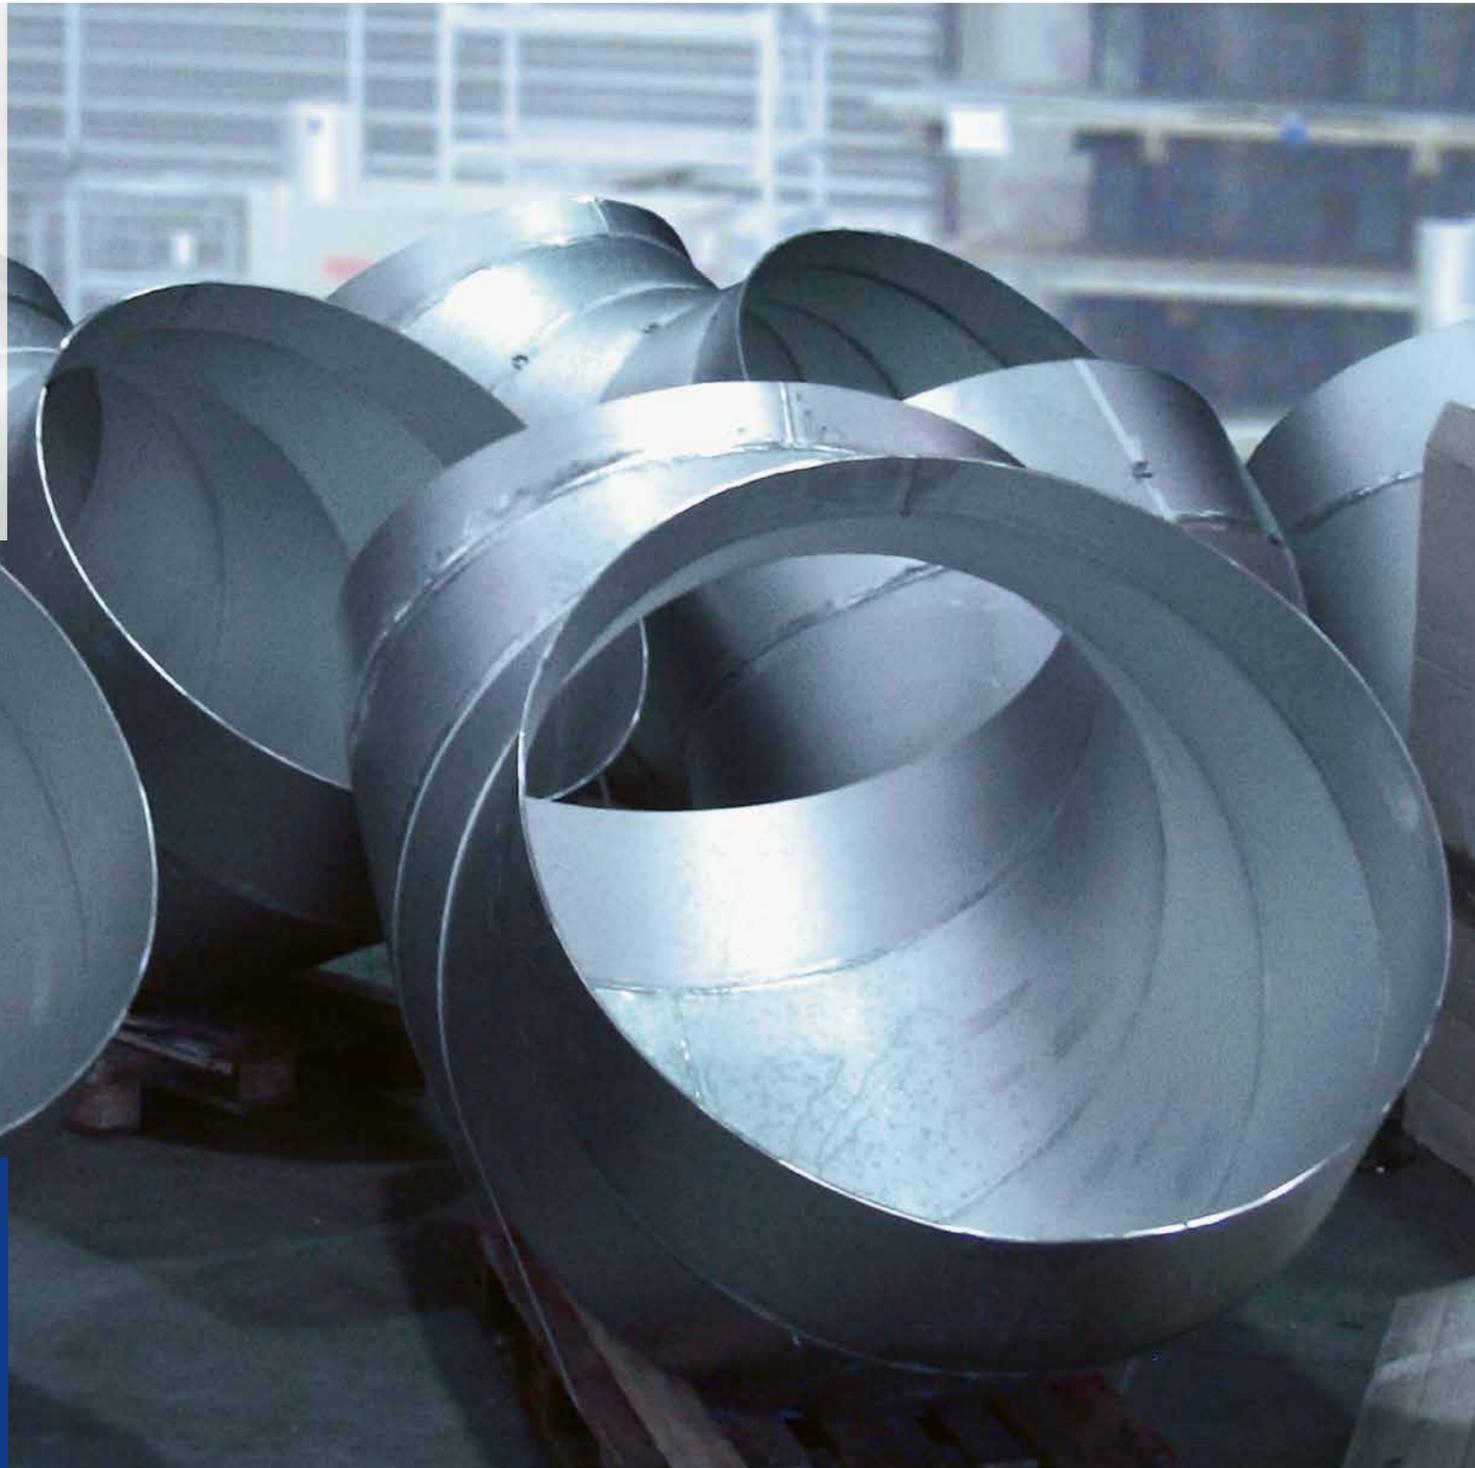

INNOVATION

Ingenious by tradition

Our story began back in 1919, when the Firth Brown company from Sheffield, England, opened a Swiss subsidiary to market stainless steel, which the company patented in 1913. Following the takeover of the Swiss company by the Hempel-Group in 1979 we continued to introduce new alloys to the market and even made our own material developments. Today, the Staybrite 4435WCQ is a unique proof of a quality grade in the Swiss watch industry. We incorporate new developments as well, for example nitrogen alloyed steels in the form of powder for 3D printers.

Material procurement 4.0
is our topic

EXPERTISE

Meeting expectations

In our competence centres for the medical, watch, aviation or process industries, we stock the right material in accordance with national standards and specific approvals. Our industry experts have comprehensive know-how so they can consult and supply the correct material to the largest companies in the industries.

Often we trade the products of our customers and that's how we generate advantages for both sides. This works best in niche and global markets, where we feel at home.

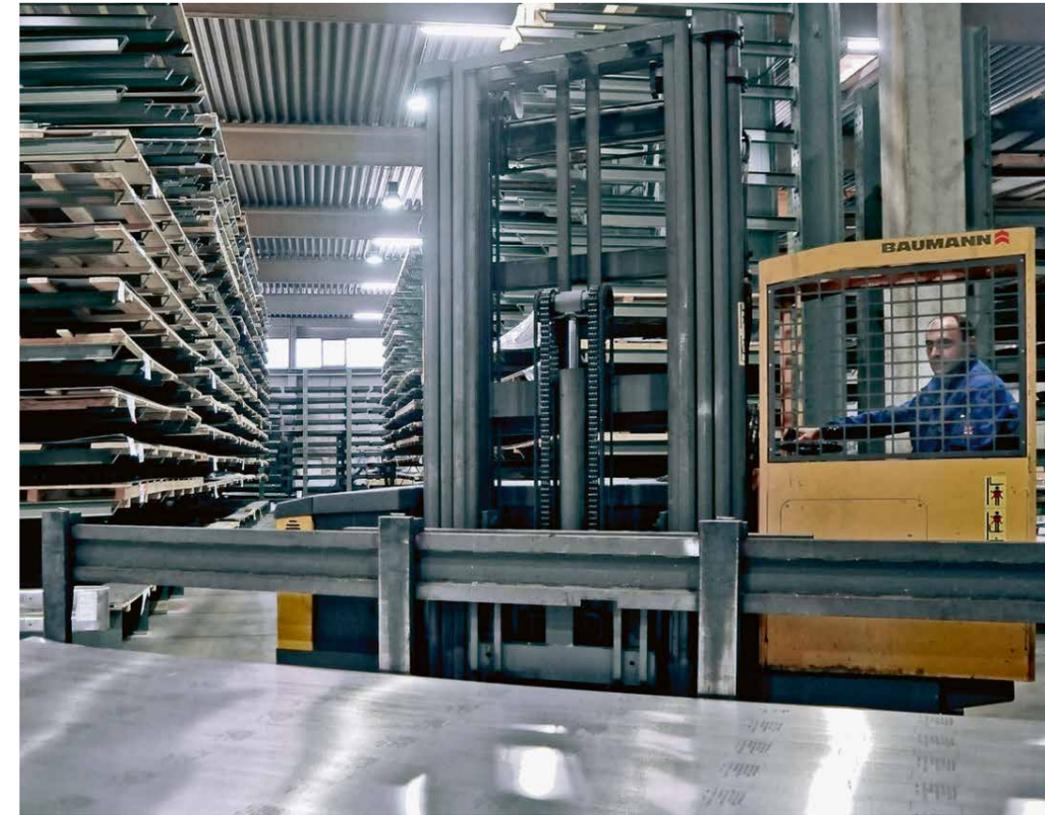

Trust our industry know-how

INDEPENDENCE

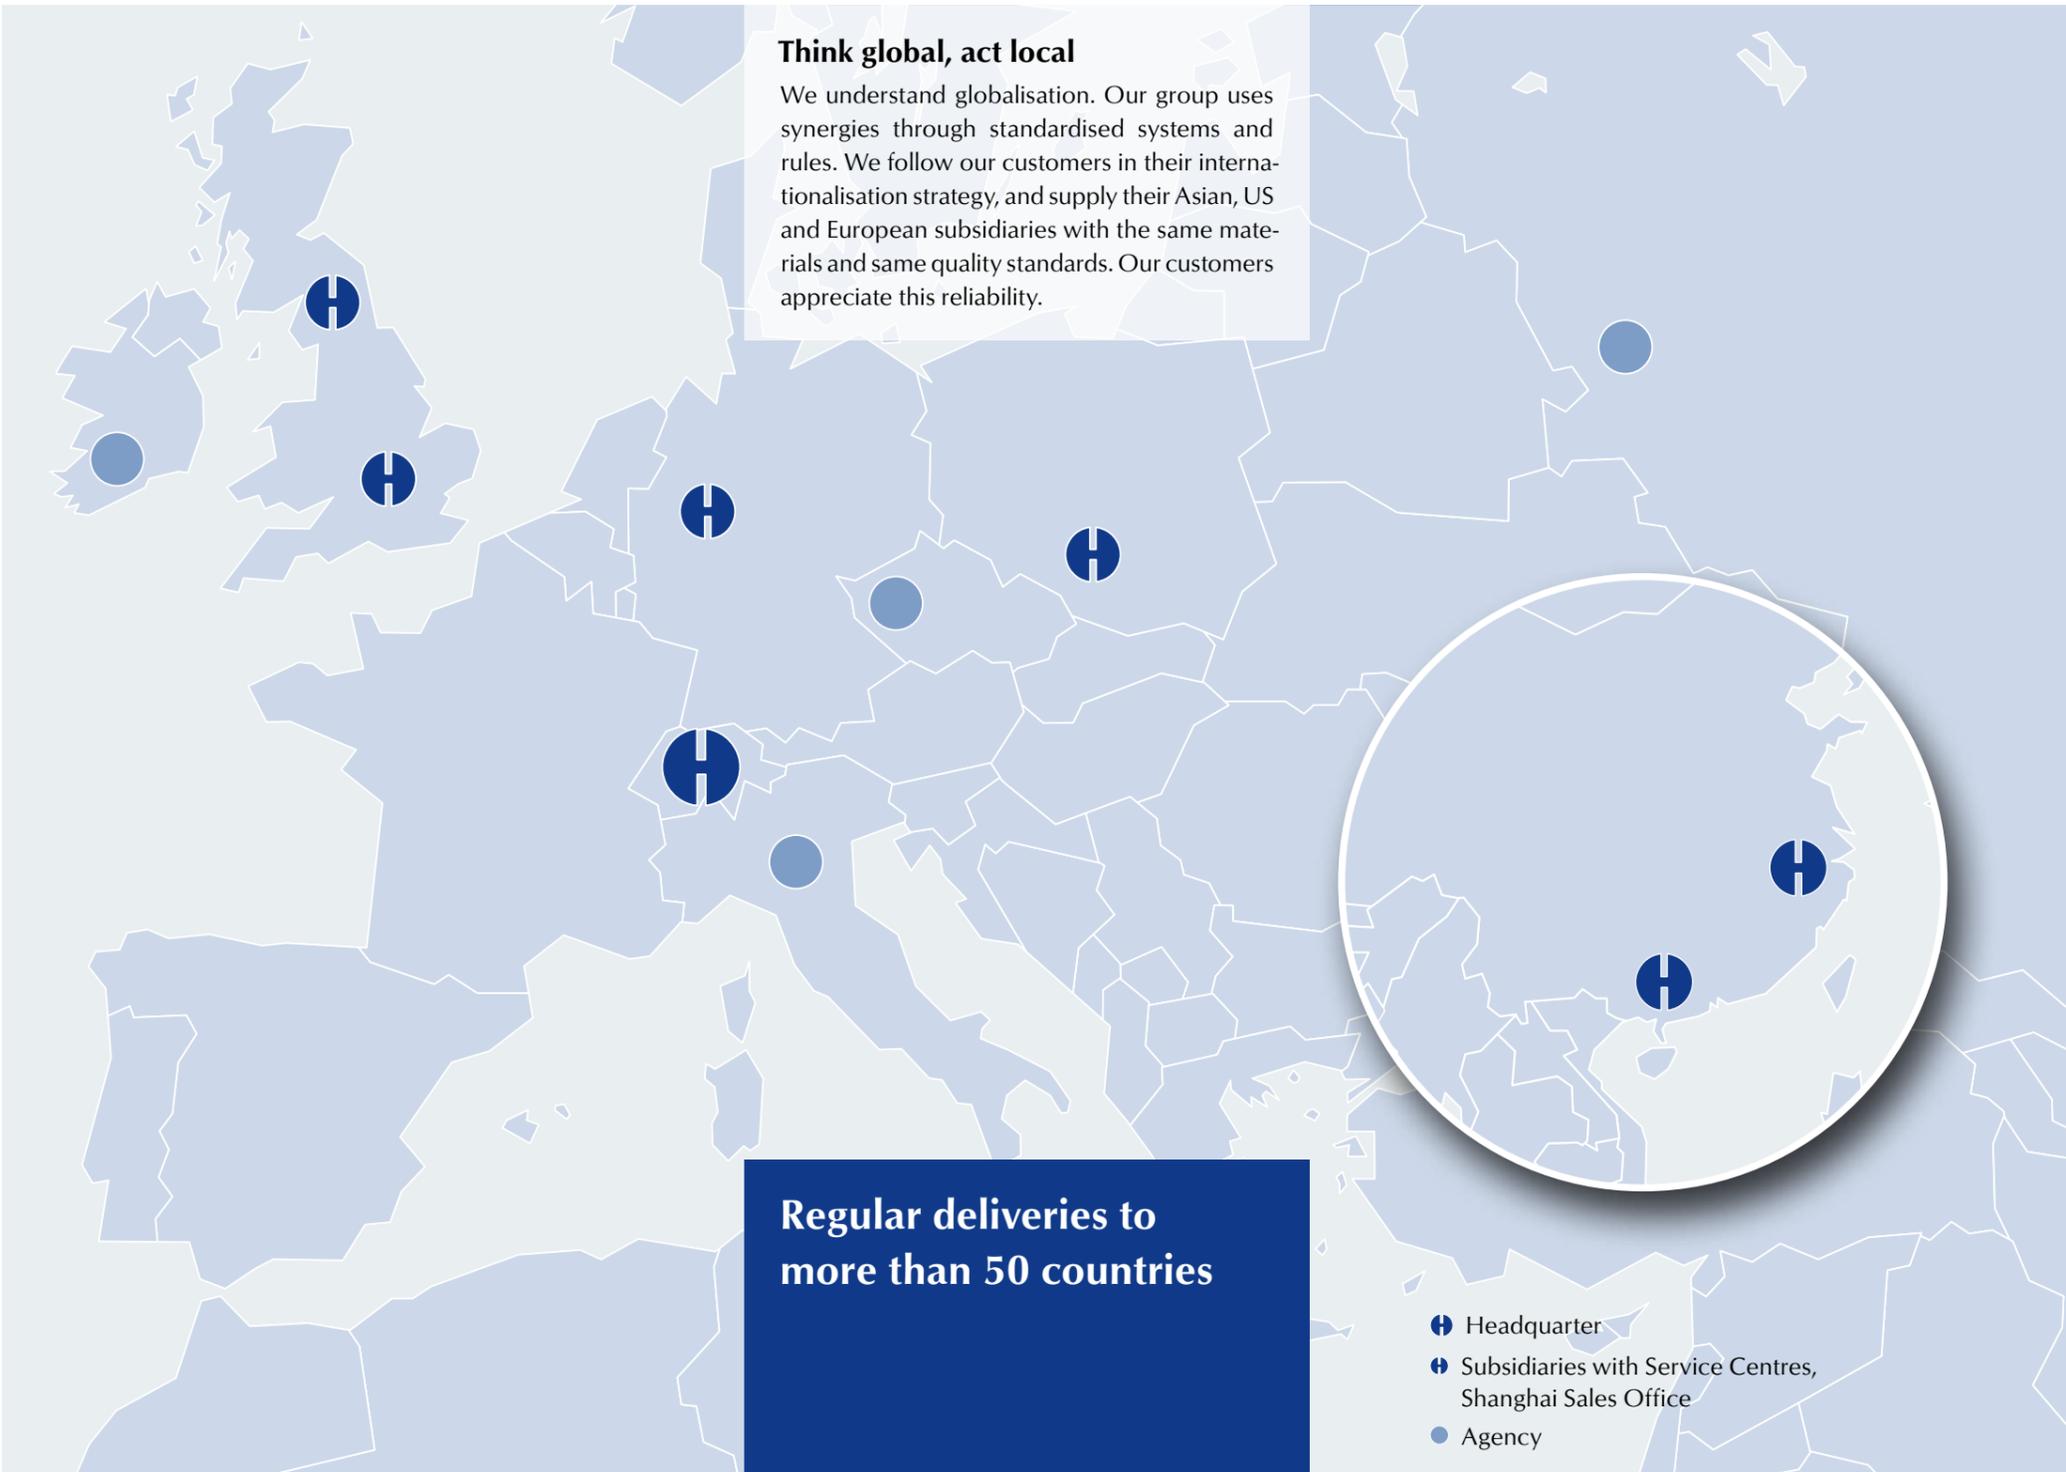

The best solution

No exclusive distribution contracts or agencies limit Hempel in sourcing material. Our presence in procurement markets worldwide enables us to find the best suppliers and for example in China to verify the product quality on site before it is shipped. This independence gives our experts also the freedom to think differently; for example, a profile can be manufactured in different ways: cold-drawn, cut or machined. All might depend on the customers' needs: quick delivery, best price or highest quality.

Only committed to
the customers

INTERNATIONAL

Think global, act local

We understand globalisation. Our group uses synergies through standardised systems and rules. We follow our customers in their internationalisation strategy, and supply their Asian, US and European subsidiaries with the same materials and same quality standards. Our customers appreciate this reliability.
